Solid IT GRC practices will eventually increase customer confidence and trust in using your company products and services
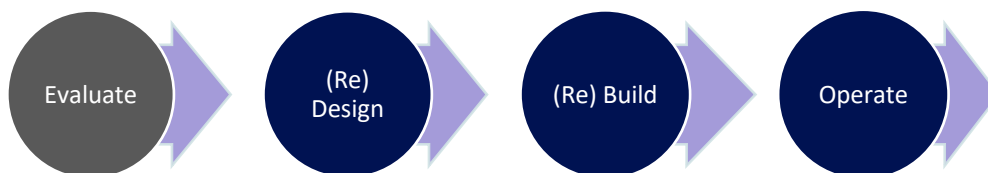

IT Governance Risks and Compliance

Being a trusted IT service provider entails protecting critical company assets and the security and privacy of customer data

The problem is that many organizations have ineffective measures to do so :

- Absence of comprehensive IT risk and governance framework to ensure continuous security/risks monitoring and improvements.
- Technology-centric protection that is not supported with proper operationalization or operating model.
- Reactive security driven by incidents, instead of security by-design.
- Limited capability and capacity to run effective IT security operations.

IT GRC service will help you review and design effective IT GRC instruments and, if needed, build and run it for you

Evaluate → (Re) Design → (Re) Build → Operate

Contact us at sales@ked-consulting.com. **We'd love to help you succeed!**

Immediate Actions

1. Schedule a 60-mins meeting to tell us your IT GRC story.
2. We will get back with a proposed approach in 1-2 weeks.
3. Conclude technical and commercial discussion.
4. Kick-off project.

We'd love to make the process lean so you can address current issues faster.

Without strong governance and protection, your organization's reputation is at serious risk. It's not a matter of IF, but WHEN the next major incident will happen
